An Initiative by "The Last Centre"

**INFRASTRUCTURE**

The true education happens between the mentor and prodigy, the teacher and the student. The tradition across cultures have seen the direct transfer of education from guru to the disciple without any infrastructure in myriad of places be under a tree or be it on a battle field.

At Echelon for us, the intimate engaging conversation between the faculty and students is the core of education. However, the infrastructure is a vital support to enhance the effective communication and deepen the experiential understanding and creating the space sustainable to bring upon a culture of inspiration, exploration and invention. To call upon the future of engineering education and its transformation, Echelon is fundamentally equipped with the state-of-the-art infrastructure which remains unparalleled in the NCR region with 17.5 acres of land with centralized air-conditioning, separate administration & library block, separate boys & girls hostel, excellent arena of sports facilities covering all range of sports viz tennis, cricket, basketball, football, kabaddi etc., 70+ hi-tech laboratories for cutting edge engineering education, smart rooms etc.

Rooted in the spiritual wisdom, the entire infrastructure is designed that to create, support and nourish the space where the experiential education at the leading edge and ongoing evolution of understanding is a natural way of life.
